

Sales Performance Analysis Report

Global Superstore

The Global Superstore's Power BI dashboard provides a comprehensive overview of the company's sales and profitability across several key dimensions, including time, region, customer segments, and product categories. In this report, I will summarize the main findings and insights from the data, providing actionable recommendations to optimize performance.

Key Performance Indicators

The company achieved **total sales of \$12.64 million** and generated a **total profit of \$1.47 million**, serving **795 customers**. The **average profit per transaction** was \$28.61, and the **average order processing time** was 3.97 days. These metrics indicate a moderately profitable operation, with plenty of room available to increase efficiency and profit margins.

Sales and Profit by Time

Yearly Trends show peak sales in **2012 (\$4.3M)**, followed by a decline in subsequent years, highlighting the need for further investigation into potential market or operational changes after 2012. **Monthly sales trends** peak in **June, September, and December** most likely because of seasonal demand, business cycles, or promotional campaigns. These months are ideal for marketing efforts, inventory ramp-up, and special discounts.

Week-day-wise performance reveals that **Thursday and Friday** are the top-performing days in both sales and profit, contributing over 17% each to the overall figures. **Monday through Wednesday** maintained steady but lower performance, while **weekends, especially Sunday**, showed significantly reduced activity. This trend suggests business operations are strongly weekday-driven, and promotions should focus on mid-to-late week.

Customer and Segment Analysis

The **Consumer segment** dominates across all metrics:

- **Sales:** 51.48%
- **Profit:** 51.06%
- **Customer count:** 51.7% This is followed by **Corporate** and **Home Office** segments, with each accounting for approximately 30% and 18% respectively. The Consumer segment should continue to be the primary focus, though Corporate and Home Office segments represent viable areas for strategic growth.

Product Category and Sub-Category Insights

Among the three main categories:

- **Technology** leads in total sales (\$836K+)
- **Furniture** performs strongly (\$742K)
- **Office Supplies** have the highest customer count but lower profit per transaction

In sub-categories, **Phones**, **Chairs**, and **Bookcases** are consistent top performers. For instance, **Phones** peak at \$214K in monthly sales, especially in **June and August**, indicating seasonal or promotional impacts. **Chairs** and **Bookcases** show strength in **September–December**, possibly linked to budget cycles or academic calendars. Conversely, products like **Envelopes**, **Labels**, and **Fasteners** consistently underperform, indicating a need to reassess their pricing, bundling, or marketing strategies.

Impact of Discounting

Discount strategies have a **direct and measurable impact** on profitability:

- **0–10% discounts** generate **70.83% of total sales** and an outsized **143.71% of total profit**, confirming them as the most efficient range.
- **Discounts over 30%** result in **negative profitability**, with the 51%+ discount bracket leading to a **28.12% loss** despite accounting for just 2.94% of sales. This could be to retain customers at the company's cost.

This clearly indicates that **deep discounting is not sustainable** and should be limited to clearance or strategic campaigns. The company should focus on **maintaining discounts below 20%**, where marginal profitability is still achievable.

Shipping and Operational Costs

Sales volumes are highest for **Standard and Second-Class shipping modes**, which may balance cost-efficiency and customer satisfaction. **First-Class and Same-Day shipping**, while useful in some scenarios, are less utilized and could be reviewed for cost-effectiveness.

Recommendations

The company should:

1. **Prioritize Thursday and Friday** for promotions and resource allocation.
2. **Cap discounts below 20%**, with a focus on the 0–10% range to maximize profits.
3. **Boost inventory and marketing** for top sub-categories (Phones, Chairs, Bookcases) during peak months (June, September, December).
4. **Reassess or bundle low-performing items** to reduce overhead and improve sales.
5. **Explore growth opportunities** in Corporate and Home Office segments.
